

Tenses Worksheet for Class 10

Fill in the blanks with an appropriate verb form.

More and more people in the country (are looking / have looked / looking) at the sun for cleaner energy options and rightly so. India (receives / is receiving / has received) a huge amount of sunlight every year. If (harnessed / harnessing / harness) through cost effective methods, this sunlight (can / could / would) be used to produce a whopping 600 giga watts of electricity. This is more than five times the annual power consumption of India which is only 120 giga watts. But despite the fact that the potential is huge, what India currently (derives / is deriving / derived) is only 10-15 mega watts annually.

The most well-known utilization of solar energy is through solar photovoltaic (PV) cells. Here sun's light (converted / is converted / has converted) by the PV cells into Direct Current (DC), thus giving you electricity. This electricity can then be used to run almost all gadgets in your home. Another method (involve / involves / involving) the use of sun's heat instead of light. Energy (produced / producing / produce) from sun's heat is called thermal solar energy.
